

Petroleum Test Equipment since 1873

In 1873, Mr. Berthold Pinsky, an engineer at the "Kaiser-Wilhelm-Institute" in Berlin, today known as the "Bundesanstalt für Materialprüfung" (German Federal Institution for Materials Testing), founded his own company and produced Pinsky-Martens flashpoint tester, Abel-Pinsky flashpoint tester, as well as viscometer, grain tester and other machinery.

1886, upon his appointment to the official position of a "Royal Prussian Planning Officer", Mr. Pinsky sold his company to two of his employees, Mr. Wilhelm Sommer and Mr. Max Runge.

By then, the above products were marketed in Germany, the Netherlands, Russia and Romania already.

During the bombing of Berlin the factory was partially destroyed and had to move to other quarters. In 1948 a manufacturing line of mineral oil test instruments for the german speaking market was started.

Following the reunification of Germany, **SuR** reformed and renamed under Petrotest® Instruments GmbH & Co KG.

Due to the need for expansion Petrotest® relocated in a brand new building on the outskirts of Berlin in the Dahlewitz Industrial Park.

Today approx. 60 employees are engaged in the production of mechanical and electronic laboratory instruments such as flashpoint tester, distillation units, Fraass breaking point tester, texture analyzer etc.

Further improvement and development of more automatic petroleum testing equipment can be expected.

In order to be a highly flexible and reliable partner to our customers, we decided to locate the entire range of branches needed in our company under one roof.

- Application
- Customer Care Centre
- Electrical & Mechanical Design
- Software Development
- Production incl. CNC-machinery
- Assembling

- Quality Control according ISO 9001
- Marketing
- Order & Shipping
- Stockage

This gives us the potentiality to provide even customized solutions.

More than 75 % of the products we sell are own production (incl. CNC-machines).

Assembling of the instruments in workshop.

Safety & quality control.

Inhouse lab & seminar room used for training our distributors or testing customer samples.

Petrotest® Product Range

- ✓ Sampling Devices
- ✓ Density Meter
- ✓ Viscometer
- ✓ Distillation Equipment
- ✓ Flashpoint Tester
- ✓ Test Equipment for Liquefied Petroleum Gas
- ✓ Instruments for Determination of Sulphur & Chlorine in Petroleum Products
- ✓ Oil Testing Instruments
- ✓ Instruments for Examination of Lubricants
- ✓ Wax & Grease Testing Instruments
- ✓ Texture Analyzer / Penetrometer
- ✓ Bitumen Test Equipment
etc.

This most comprehensive sales program includes more than 200 standardized test instruments. They comply with ASTM, DIN, EN, ISO, JIS, IP, AFNOR, GOST and other related standards.

Selected, well trained, distributors and local partners of Petrotest® guarantee an excellent service for the customer all over the world.

For more informations about products, new developments & local distributors or even for looking for occasions as well as for technical support visit the Petrotest®-website www.petrotest.com.
